

Trials that are Changing Lives

DATA-DRIVEN

From the lab bench to the clinic, we increase the odds of successful drug development with our translational lab. Not only can we screen molecules both in vivo and in vitro to propose the best development path earlier on, but we can identify the right patients for the right trials with the right partners.

THE RESULT? Scientifically-driven, efficient studies.

RIGHT DOSE AT THE RIGHT TIME

We have the expertise to guide multi-center phase I design.

We utilize a select group of investigator sites in North America and Europe to conduct your phase I trials.

Our robust processes ensure the efficient management of patient cohorts across those sites.

THE RESULT? We can determine the most efficient path to get you to the right dose for your drug.

EXPEDITING TRIALS

We expedite late-phase trials through our global network – building relationships with more than 400 investigators spanning over 30 countries, in all regions.

Fostering these relationships over 20 years has resulted in a trusted and effective network that delivers on its promise with the quality required by any Sponsor or regulatory authority.

THE RESULT? All of the phase 3 trials we have conducted to date were enrolled on time.

QUALITY, COST & FLEXIBILITY

We have a state-of-the-art suite of systems that maximizes efficiency.

We can offer our services to support your activities and reduce overhead burden.

Whether you want to outsource all services or just one activity, we are here to help with the effective execution of your clinical trial.

We create cost-effective studies focused on fast patient enrollment and as a result, faster data collection.

THE RESULT? Your budget goes further and you get your results sooner.
